* 4 First-Aid Measures

· **Description of first aid measures**

- **General information:** If symptoms persist, call a physician.
- **After inhalation:** In case of unconsciousness place patient stably in the side position for transportation.
- **After skin contact:**
 - Remove contaminated clothing and wash before reuse.
 - Immediately wash with water and soap and rinse thoroughly.
 - If skin irritation occurs, consult a doctor.
- **After eye contact:**
 - Rinse opened eye for at least 15 minutes under running water. If symptoms persist, consult a doctor.
 - If easy to do so, remove contact lenses if worn.
 - If eye irritation occurs, consult a doctor.
- **After swallowing:** If swallowed and symptoms occur, consult a doctor.
- **Information for doctor**
- **Most important symptoms and effects, both acute and delayed:**
 - Ingestion: Can cause irritation and severe corrosive burns to mouth, throat, and stomach, and may be fatal if swallowed.
 - Inhalation: Gases or acid mist can cause severe irritation or corrosive burns to the upper respiratory system, including nose, mouth, and throat. Lung irritation, nitrogen oxide poisoning, and pulmonary edema can also occur. May cause severe breathing difficulties which may be delayed in onset.
 - Skin: Can cause severe corrosive burns or irritation. May stain the skin bright yellow.
 - Eyes: Can cause irritation, corneal burns, conjunctivitis, and may cause blindness. Contact lenses should not be worn when working with this material.
 - Summary of Chronic Health Hazards: Long-term exposure to concentrated vapors may cause erosion of teeth and lung damage. Long-term exposures seldom occur due to the corrosive properties of the acid.
- **Indication of any immediate medical attention and special treatment needed:**
 - Note to physicians: Nitric Acid vapors contain Nitrogen Oxides (NOx). Acute overexposure by inhalation can result in delayed pulmonary edema. Observe affected patients for delayed effects up to 48 hours after exposure. Screen patients with chest x-ray, arterial blood gas, methemoglobinemia level, and pulmonary function tests. Bronchiolitis obliterations may develop weeks after exposure.
